## CNC ROUTING MACHINERY

### **Multicam – CNC routing solutions**

*Multicam CNC routers have been used in various engineering industries since inception. At Austech the company will demonstrate how Multicam CNC routers can be a solution for engineering companies in the plastics, metal and composite products industries.*

Multicam heavy-duty CNC routing machines are proudly made in Australia. Designed for profile-cutting sheet product and extrusions including metals, plastics, composite materials and timber products, they are used in the manufacture of aluminium boats, aerospace components, truck body parts, caravan & motor-home components, kitchens, furniture or any other flat sheet product.

They are used extensively in the ACM and HVAC industries and include many unique design features aimed specifically at making the processing of ACM cladding and ducting and insulation materials easier and more efficient. Other specialist features ensure that Multicam machines are an excellent alternative to plasma and laser machines that typically have higher running costs and greater servicing demands.

Multicam manufactures a range of machines with process areas starting from 2,400mm x 1,200mm, with larger and custom sizes available. Multicam machines can be supplied with a variety of accessories including vacuum hold-down beds, fully automatic toolchangers, automatic loading and unloading attachments, mist cooling/lubrication system, chip extraction, multiple drill heads, tangential-oscillating knife attachments and more.

Multicam Systems has over 30 years of experience in the manufacture of flatbed CNC routing machinery and has been providing CNC routing solutions through its offices in Newcastle, Melbourne and Brisbane. Multicam CNC routing machines are backed up by a highly skilled team of factory-trained technicians ensuring the best possible level of advice and service. The ability to link with software programs such as Mastercam, SoldiCAM, Surfcam, Fusion360, Rhino, Pytha, ARTCam, Enroute and numerous other products makes Multicam CNC routers an obvious addition to any engineering company.
