

Automation System Demonstration – Open House

ADDE is in the final stages of building and commissioning a centralised palletiser for AstraZeneca in Sydney. An Open House event on July 12 will give you the opportunity to see this innovative solution in operation before it undergoes final testing and is packed and shipped to the customer.

- 7 x UR10 Collaborative robots palletising
- 2 x ABB Industrial Robots shrouding and handling pallets
- 5 x Swisslog CarryPick AGV as ‘virtual pallet conveyors’
- Integrated stretch wrapping and strapping

The system will accept shippers from up to 11 production lines, sort the product for palletising by the UR10 robots, then use the CarryPick AGV to move the pallets through scanning (serialisation), wrapping, labelling, shrouding, corner-posting and strapping before accumulating the finished pallets for dispatch.

You are welcome to join us for a casual open house event to see the system in operation.

- 4:00PM to 6:00PM
- Thursday 12th July
- ADDE. 6B 841 Mountain Highway Bayswater, VIC

If you are thinking of coming an RSVP would be appreciated but not essential to sophie@adde.com.au
