

Company overview

Moulding tomorrow today

Hello,

Let us introduce ourselves.

We are a **global manufacturer** of **silicone, rubber and plastic** components, specialising in injection, compression moulding, compounding, post processing including sub-assemblies and testing.

We pride ourselves on **tailoring our services** to meet manufacturing requirements in multiple industries such as healthcare, mining, defence, rail and many more.

We are certified to **ISO 13485, ISO 14001** and **ISO 9001**, with internal management systems placing a strong focus on delivering quality components to our customers.

With multiple locations in Australia and South-East Asia, you can count on us to build your success.

PRECISION INJECTION MOULDING

TAILORED MANUFACTURING SOLUTIONS

MOULDING SINCE 1976

CERTIFIED QUALITY MANAGEMENT SYSTEM

Pictured: One of several production facilities.

"The whole Baron team worked really hard to create our product, patiently working with us through the iterations and testing that we needed to make sure that the product and production systems are the highest quality for our customers" - CEO & Founder Milkdrop

SILICONE

- Custom precision moulding of liquid silicone rubber (LSR) and solid silicone rubber (HTV) via injection, transfer injection, cold runner and compression processes.
- Latest technologies operating from multiple production facilities utilising in excess of 250 specialised machines.
- Strong focus on delivering scaled global healthcare solutions with clean room environments for medical grade silicone.

INDUSTRIAL BLACK RUBBER

- We've been manufacturing industrial black rubber components since 1976.
- Specialists in custom compounding, injection and compression moulding.
- Provide manufacturing solutions in multiple industrial industries such as mining, rail, defence and energy.

PLASTIC

- Through innovation our rapid prototyping process provides quick turn around and express feedback, assessing the manufacturability of your design.
- Our highly skilled team will support the project from collaborative concept design through to production.
- Sophisticated machine capabilities utilising precision single and multi-cavity tooling to provide a wide range of complex plastic parts.

DID YOU KNOW? Baron is one of the largest silicone moulders in Australasia.

TOOLING

- We have in-house tooling capabilities to help control lead times and preserve our customers intellectual property.
- We operate dual tooling facilities, doubling our initial tooling capacity creating in excess of 1,500 precision tools since 2015.
- Our engineering and tool making capabilities include over-moulding, liquid silicone rubber, transfer injection, compression, cold runner technology and more.

LOCATIONS

- Privately owned company with head quarters in Australia and multiple facilities in South East Asia.
- Each location is fully equipped with ISO certifications, experienced team members and advanced machinery.
- Based on your project requirements we will advise the best location to manufacture your product.
