About us

Who we are and what we do

About us

About Cadpro

Cadpro is a local team of 35+ specialists providing CAD, BIM, construction and manufacturing software. We are passionate about working smarter by using innovative technology to improve outcomes for people, businesses and the environment.

We understand how to use technology to streamline any project and maximise productivity. We support and train clients to maximise the use of their software and increase productivity, providing software, technical expertise, training, implementation and customisation. By tailoring a solution to your requirements we can equip your team to conceptualise, collaborate and create more effectively.

Our team is passionate about advancing your business through software, support and technical expertise. With over 30 years of experience in New Zealand and Australia, we can help you select the right solution for your next project.

Why work with us?

- New Zealand's leading, award-winning supplier of CAD, CAM and BIM software
- Autodesk®-certified with Platinum Partner (NZ) and Gold (Australia) status.
- 30 years' experience
- Local support in New Zealand and Australia
- Technical specialists in the AEC (architecture, engineering, construction) and design & manufacturing industries
- Certified training facilities with qualified, expert trainers

We are CAD software specialists that help businesses unlock future opportunities and outcomes through fast, tailored and innovative software solutions.

About us

Our core values

Trusted

A safe pair of hands you can depend on. We draw on expertise and experience to deliver quality work that adds value to your business.

Considered

Actively engaged in our work. We make informed decisions and care about building strong, enduring relationships.

Creative

Curiosity pushes us to innovate. Experience allows us to develop custom solutions to meet your requirements.

Collaborative

We maintain a proactive dialogue with customers to develop trust and respect, working together to find solutions.

Transparent

Direct, open communication is key. We realistically manage expectations and acknowledge when things can be improved.

Our approach

Tailored, innovative solutions

Processes such as BIM, CAM and digital prototyping combined with the introduction of cloud computing, analytical tools and collaboration tools have dramatically changed the way we think about design, documentation, construction and manufacturing. It's not just about learning how to use the technology, it's a total process change that requires companies to redevelop standards, libraries and working protocols.

We are creative problem-solvers - and with that comes an innovator's mindset. Whether it's developing custom software solutions, implementing the latest technology or finding creative ways to optimise processes and workflows, we are always looking for ways to help our clients stay ahead of the curve.

This approach delivers solutions that not only meet our client's immediate needs, but also position them for long-term success in a rapidly evolving business landscape.

Working with us

Design & manufacturing capabilities

Discover integrated, industry-leading solutions which equip you to design and manufacture with confidence. Explore how technology can maximise productivity, improve quality and innovation, accelerate production, reduce errors and allow you to gain a competitive edge in a global market.

We offer a comprehensive set of solutions for design, digital prototyping and development. This gives teams the ability to explore, communicate, refine and implement new ideas into viable products.

Our skilled team provides experience and expertise across digital prototyping, design for manufacture, data management, business systems integration and more. Partner with us to gain local, on-demand support and access to our highly specialised and experienced design and manufacturing technical staff.

Our capabilities

- Multi-axis, simultaneous machining software
- CAD & CAM technical expertise, support and training
- Post-processors for high end machines with complex tool paths
- Posts for Autodesk PowerMill, FeatureCAM and Fusion 360
- Track record of integrations between ERP & manufacturing software
- Product Data Management expertise with Vault and CAD data management
- Ability to conduct assessment for business processes/technical workflows and processes
- Two Autodesk Manufacturing Expert Elite technical staff
- In house development team for integration, post processor work and software development

Working with us

Architecture, engineering and construction capabilities

Using powerful software tailored to each project's requirements, we equip architectural teams to conceptualise, collaborate and create more effectively. Our products and services have the power to better connect people, processes, and ideas to create more resilient and sustainable solutions.

Our specialist team can support on all phases of a project, from configuring software to consulting on operational improvements. Partner with us to gain access and local, on-demand support with our highly specialised and experienced architecture, construction and engineering technical staff. We can provide experience and expertise across disciplines, offering a dynamic and innovative resource for the Australasian architecture, engineering and construction industries.

Our capabilities

- Autodesk and Unity software sales , installation and configuration
- Startup and implementation services for Autodesk solutions including Revit , Civil 3D, Advance Steel, Reality Capture and more
- BIM adoption, risk management and implementation
- Revit content management and development
- Assessment for standards implementation, processes, technical workflow development
- 3D rendering, virtual reality and augmented reality solutions
- Autodesk Construction Cloud (BIM 360 / Unified Platform) technology adoption and integration

Services & support

Working together

Our process

Engagement approach

The following process map represents a typical high-level Cadpro services engagement approach. Each service deliverable is defined as a 'project'.

Service deliverables are managed by a series of task-based goals, with set milestones and measured outcomes. This process map can be further refined to develop a repeatable approach to deploying BIM technology on future service-based 'projects'.

To achieve a positive outcome, we want to deliver high-quality solutions that include Autodesk technologies and / or other technology offerings, as well as complementary solutions that can be delivered by our programming team.

Mobilisation meeting

Agree on deployment goals, tactical details and measures.

Alignment & review

Prepare stakeholders and key users (champions).

Configuration & training

Configure solution and train key users.

Deployment support

Reduce manual effort and extend the capabilities your software.

Close-out meeting

Review success measures, recommendations and next steps.

Services & support

Our technical services

At Cadpro, we understand how to tap into the power of technology to facilitate successful project delivery. Unlock the full potential of your software with our range of targeted services and training.

Gain access to our experienced technical services team to troubleshoot, configure, customise or develop your software. Cadpro Technical Time is purchased in hourly blocks and can be used however you wish. Select a standard service package or contact us to scope and quote based on your requirements.

Cadpro Technical Time contracts can be purchased in blocks varying from 1-40 hours (or alternative arrangements by negotiation) and includes the following services, delivered remotely.

Product support

Enables remote interrogation and troubleshooting of your software.

Templates & configuration

Establish templates and configure software to maximise productivity when starting projects.

CAD & BIM management

Equip your team with the insight and tools to more efficiently plan and manage projects.

Software automation & development

Reduce manual effort and extend the capabilities your software.

Training

Learn from qualified instructors on site or online to accelerate your understanding.

Services & support

Cadpro Technical Time

Gain access to our experienced technical services team to troubleshoot, configure, customise or develop your software with Cadpro Technical Time: a prepaid service, purchased in hourly blocks, and can be used however you wish.

Learn how we can equip your team with the insight and tools to more efficiently plan, design, execute and manage each project.

Contact us to scope and quote based on your requirements.

Includes

- Installation support & licensing support*
- Troubleshooting
- Configuration
- Implementation
- Customisation & development
- On-demand product support
- Ad-hoc training
- Workflow & best practice guidance

Benefits

- Local, priority support
- Skilled guidance from our technical experts
- Use however you wish
- Purchase in hourly blocks
- Provided via telephone, email or remote desktop software
- Delivered remotely or on site**
- Speedy resolution of even the most complex problems

**Support only — does not include installation or licensing implementation. **On site delivery incurs additional charge(s).*

Services & support

Cadpro training

Cadpro is an accredited Autodesk Training Centre (ATC) with comprehensive resources designed to accelerate your understanding.

We offer a range of training options to suit your needs, including on site corporate tuition, in-house workshops, remote and one-on-one training, customised training, and skills assessments.

Learn from qualified instructors on site or online using sample projects and exercises that emphasise real-world, practical applications. Our courseware is designed to develop your technical expertise, boost your productivity, maximise design quality and identify areas for improvement.

Our training options include

- Online on-demand training platforms
- On site corporate tuition
- In-house workshops
- One-on-one training
- Customised training
- Skills assessments

Services & support

Software automation & development

Our development team can custom build Inventor, AutoCAD, Revit or BIM 360 plugins to automate daily tasks, connect your models to a database or build you your own custom program of any size to tackle your design requirements.

We develop on Forge, iLogic, LISP, VBA, ObjectARX and .NET platforms, so we can match your platform and output requirements.

Our team uses an agile software development process, including user stories, sprints, feedback and backlog. As a registered Autodesk Developer, we make use of the Autodesk Developer Network to support our software development team.

If you wish to discuss software development in further detail, we can organise a meeting with our development team lead who will be able to provide further detail as to our capabilities and successes we have built with clients.

Our approach

- We take an iterative, collaborative approach which relies on strict feedback cycles, pragmatic knowledge and continual improvement.
- We nurture and maintain a culture of continuous improvement in our systems and processes.
- We maintain visibility and transparency, to keep both internal and external stakeholders informed and involved.
- Our scrum teams work in 2-week development sprints to deliver fully functional, useable increments throughout a project
- Our developers are constantly exploring new technologies, frameworks, and ideas, in-line with our core values.

Our customers

Testimonials

“We were impressed with how much information, tricks and tips Gavin was able to cram into three days. I think it was very helpful having a trainer whom so obviously lives and breathes the product on a daily basis. Gavin tweaked the course to suit the needs of the people in the class and considering the wide ranging experience of the five students, he did a great job of making it relevant to all of us.”

– **Glenn N. Martin,**
Glenn N. Martin Ltd
(founder of Martin Aircraft
& inventor of the Martin Jetpack)

“The best thing for us was that Ignus was able to look at one of our previous projects and the Revit files and tweak the training to make it more useful and Shade Systems specific. We have a unique business structure and not too many of the automated connections in Advance Steel apply to us, so Ignus explained all the customisations we could do to match our workflows, product, and way we build our structures. Shop drawing projects have been cut by a third since implementation three months ago and projects have been cut in half.

– **Gordon Simpkin,**
Shade Systems

‘The knowledge that I learned has advanced me years. I’m now developing products that I would’ve never considered previously prior to my experience with Cadpro. What I would have considered difficult is simple now. The things that Scott changed, even the things that the Fusion 360 post-processor could do, Scott made them better. After Scott knew what I was doing, he changed and optimised the software and machine with things I would have never known about. What I learnt from Scott and Cadpro was instrumental... The business literally wouldn’t have happened without you guys.

– **Erik Cortina,**
Cortina Precision

Our team

Capabilities & resource

Skills & capabilities

Our team

Our biggest asset is the people who work here. For more than thirty years, we have consistently invested in providing our clients with the best technical and administrative support available.

Our multi-disciplinary team of experts ensures that our technical knowledge is rooted in best-practice standards and industry-leading skills. A cross-section of skills which translates into a dynamic and innovative resource for the Australasian design industry.

Individually, we are experts across a range of subjects. Collectively, we have a strong team approach to provide the best outcomes for our clients' business objectives and interest.

Our expertise

- Technical specialists in the AEC (architecture, engineering, construction) and design & manufacturing industries
- Autodesk® Platinum Partner and Autodesk-certified
- 30 years' experience
- CAD, CAM and BIM technology
- 2D drafting
- Post-processors
- Documentation and data management
- 3D modelling and rendering

Technical team

Design & manufacturing

Our skilled, multi-disciplinary team provides experience and expertise across digital prototyping, design for manufacture, data management, business systems integration and more. Our technical knowledge is rooted in best-practice standards and industry-leading skills. Partner with us to gain local, on-demand support.

Find out more about our team capabilities at cadpro.io/our-team

Scott Moyse

Design & Manufacturing Technical Services Manager

Studied Motorsport Engineering at Swansea Institute of Higher Education for 3 years before moving to New Zealand. 9 years of design, CAM & data management experience within the super yacht Industry, 4 of those years was managing a team of 11 designers with a strong focus on process and lifecycle management. Since 2013 I've been working for Cadpro, helping customers around ANZ and the USA to design and manufacture products, with a focus on design, data management, CAM and post processor development. Other experience includes, web design, blog content creation, marketing and running a small business.

	Matthew Weake Senior Design & Manufacturing/Fabrication Technical Specialist	Mike Taylor Design & Manufacturing/CAM Technical Specialist	
	Graduated with a BE Mech (Hons) (1987) from University of Canterbury. Fire protection engineering and sheetmetal production for Wormald Fire Systems. Capital Works project engineer for NZ Sugar. Development manager for Compac Industries (CNG, LPG, Petrol & Diesel dispensing systems). Sales and Technical support for Cadpro since Mechanical Desktop 2.0 (1998). Took over support of fabrication products when TSI left ANZ. Spent 6 of these years as a dairy farmer! (2005-2011)	Over 20 years' experience in the delivery of skilled services in CAD/CAM industry, with extensive time served as a mechanical engineer. Experience in the automotive, aerospace,transport, mining and relative mechanical industries. Six months spent abroad working in Japan learning Japanese manufacturing and engineering practices. Implementation of CAD/CAM systems on 'Green Field' and existing Manufacturing Sites, as well as implementation of 'Robot Cells' using CAM for the production of specialised one-off parts. Primary role in Design & Manufacturing product training, but delivers both pre/post-sales technical support and is a vital part of the Cadpro Australia team.

Gavin Bath

Team Leader - Software Development

Studied Mechanical Engineering and Computer Science at Canterbury University. Worked as a Mechanical Designer and contractor for nine years in Primary Industries, Consumer Products, Defence and Aerospace industries. Joined Cadpro in 2011 in a role split between technical consulting and software development. Formed the Cadpro Dev Team in 2018.

David Alexander

Senior Software Developer

Has a Masters in Computer Science and has experience in a wide variety of software development roles, working in industries such as e-commerce and web development, computer graphics, virtual reality, electronics design, computer security and more. Works in our development team on refining software requirements and planning the technical aspects of operations. Also manages the software development team's continuing education and professional development, assisting junior members with programming tasks.

James Kingsthwaite

Software Developer

Joined Cadpro in 2018 after completing a BSc in Computer Science at the University of Canterbury. Areas of expertise include UI/UX design, full-stack web development, application development and documentation. Favourite programming languages/frameworks are TypeScript, Python and VueJS. Enjoys coming up with creative new interface designs and workflows while ensuring that his code is written and documented clearly and is maintainable.

Joe Huang

Software Developer

Joined Cadpro since 2018 after graduating from Ara Insititute of Canterbury. Full stack developer familiar with modern web technology including Typescript, VueJS, Nodejs, Mongo, Webpack, NWjs, Docker container.

Edmund Wilson

Junior Software Engineer

Joined the Cadpro team in 2022 as a DevOps developer. Has a background in automation and technical consulting, specialises in TypeScript/NodeJS and enjoys working with Kubernetes, Linux, ArgoCD, and all things DevOps. Always looking for ways to leverage the latest tech to help streamline workflows and improve reliability. Recent achievements include the implementation of a monitoring and alerting solution that has enabled the development team to quickly identify and resolve problems, often before they occur.
